PROFESSIONAL SUMMARY

Final-year B.E. Computer Science Engineering student (expected 2027) seeking a Software Engineering Intern role. Hands-on experience building full-stack web applications (React.js, Node.js, Express.js, MongoDB) and Python backends (FastAPI, REST APIs) with automated testing, Docker, and CI pipelines. Strong foundation in data structures and algorithms, object-oriented programming, and Git-based collaborative workflows. Daily user of LLM tools (ChatGPT, Claude) across the development lifecycle. Eager to contribute clean, well-tested code and learn from an engineering team.

TECHNICAL SKILLS

Core: Python, Data Structures and Algorithms, Object-Oriented Programming, Git, Linux
Web and Backend Development: REST API design, FastAPI, HTML5
Databases: MongoDB, SQL, MySQL
Tools and Practices: Git, GitHub, GitHub Actions (CI), Docker, pytest, Agile/SDLC practices, VS Code
Machine Learning and AI: Pandas, NumPy, Scikit-learn, TensorFlow, Random Forest, Deep Learning, Computer Vision, Data Pipeline Design
Generative AI and LLMs: Daily hands-on use of ChatGPT and Claude for planning, code generation, debugging, and documentation; foundational study of prompt engineering and Retrieval-Augmented Generation (RAG)

PROJECTS

AI SOC Assistant, Multi-Agent Security Platform with Prompt Injection Defense — *Python*, *LangGraph*, *FastAPI*, *Groq (Llama 3.3)*, *Docker*, *Git*

- Built a LangGraph multi-agent pipeline (IOC extraction, threat-intelligence enrichment, MITRE ATT&CK mapping, CVE analysis, DFIR planning, AI report generation) exposed through a FastAPI backend.
- Designed a layered prompt-injection defense (pattern detection, Unicode normalization, risk scoring, instruction/data separation) that shields LLM agents from malicious log content; evaluated on 424 labeled samples with 100% precision, 95.2% recall, and 0 false positives.
- Wrote an automated pytest suite covering the defense layer, API, and graph wiring; containerized the platform with Docker and added a GitHub Actions CI pipeline.

Sri Venkataramana Motors, Full-Stack Web Application — *React.js*, *Node.js*, *Express.js*, *MongoDB*, *REST APIs*, *TypeScript*, *Git*

- Architected and independently built a role-based dealership platform for a real client, handling 200+ product listings with zero reported data integrity issues.
- Designed 12+ RESTful API endpoints with 90%+ test coverage, resolving 15+ bugs during testing.
- Applied object-oriented and modular design principles across the React.js frontend and Node.js/Express.js backend, with structured Git branching for smooth code review.

GPS-Based Tourist Place Recommender, ML Backend and API Validation — *Python*, *Pandas*, *Scikit-learn*, *TensorFlow*, *REST APIs*, *SQL*, *Data Pipelines*, *Git*

- Built a Python ML recommendation backend (Random Forest) serving location-aware predictions via REST APIs; designed 30+ functional, regression, and boundary test cases to validate model accuracy end to end.
- Built an end-to-end data pipeline (ingestion, preprocessing, feature extraction, prediction) with Pandas, processing 10,000+ records into a queryable, usable asset.
- Ran systematic performance profiling to remove 3 critical bottlenecks, reducing average API response time, and documented all results to SQA standards.

EDUCATION

Keshav Memorial Engineering College, Hyderabad, Telangana
Bachelor of Engineering (B.E.) in Computer Science Engineering, Final Year, Expected Graduation 2027
CGPA: 7.0 | JEE Mains 2023: 90th Percentile among 1,000,000+ candidates | SSC: GPA 10.0

CERTIFICATIONS AND ACHIEVEMENTS

- Post Graduate Diploma in Computer Applications (PGDCA), Grade A | Cyber Security and Ethical Hacking, Edureka
- National Python Coding Contest, Qualified Rounds 1 and 2
